Cybersecurity Graduate | SOC Analyst | Network Security & Risk Analysis

Cybersecurity graduate with hands-on experience in network security, risk analysis, and IT infrastructure, eager to apply technical knowledge in a Security Operations Center environment. Skilled in monitoring systems, identifying vulnerabilities, and documenting findings clearly. Strong foundation in Linux VMs and networking fundamentals, with a collaborative, detail-oriented approach and a drive to learn and grow within a team.

Core Competencies

Network Security & Infrastructure • Risk Assessment & Analysis • Vulnerability Assessment • Incident Investigation • Security Monitoring • Python • Windows & Linux • Cybersecurity Fundamentals • Troubleshooting • Collaboration & Teamwork • Communication • Attention to Detail

Professional Experience

IT Support Coordinator

Sep. 2023 – Dec. 2024

Mount Saint Mary College – IT Department, Newburgh, NY

- Maintained switches, routers, and firewalls; monitored network performance to support consistent uptime and security across 200+ users.
- Resolved 10+ hardware, software, and network support tickets weekly, documenting access control procedures to standardize operations and inform security posture.
- Researched and evaluated 5+ emerging technologies, presenting findings to leadership on solutions that improved organizational efficiency.

Cybersecurity Analyst – Virtual Experience

Feb. 2025

Mastercard Security Awareness Team via Forage

- Identified and analyzed phishing threats, assessing security gaps across business units to support incident investigation and response.
- Developed targeted awareness training and documentation for high-risk, non-technical stakeholders based on findings.

Student Library Assistant

Oct. 2025 – May 2026

Mount Saint Mary College – Kaplan Library

- Delivered technical support to 15+ patrons daily on computers, printers, and software, resolving issues efficiently and documenting solutions for staff onboarding.

Projects & Research

Fraud Job Posting Detection Tool – Cybersecurity Capstone

May 2026

- Built a full-stack Python/Flask/SQLite application trained on ~20,000 real and fraud job postings, using Logistic Regression with TF-IDF to achieve 90-95% classification accuracy, an improvement from 78% with an initial Naive Bayes model.
- Designed a 9-category rule-based detection layer using regex pattern matching to flag scam indicators (e.g., requests for personal information, payment requests, suspicious contact methods), each paired with a plain language explanation.
- Applied NIST risk analysis principles; managed the full project lifecycle from threat modeling through development, testing, and documentation.

Education

Bachelor of Science in Cybersecurity

May 2026

Mount Saint Mary College, Newburgh, NY | GPA: 3.24/4.0 | Hispanic Scholarship Fund Recipient

Coursework: Ethical Hacking & Penetration Testing, Network Security, Cryptography, Digital Forensics, Risk Analysis, Database Programming

Certifications & Training

Mastercard Cybersecurity Virtual Experience, Forage, February 2025

Markets Quantitative Analysis (MQA) Job Simulation, Citi via Forage, June 2026

Google Project Management Professional Certificate, June 2026

Additional Skills

Languages: Fluent in English and Spanish

Technology: Windows 10/Server, Linux (Ubuntu), Python, SQL, PowerShell, Bash, VS Code, Oracle VirtualBox, network hardware (switches, routers, firewalls)
